TERMS

THIS LIST cancels prices quoted in previous lists. The prices in this catalog are net and subject to no discount. Those desiring to open accounts will please furnish three references to parties in the trade with whom they have had credit relations and sufficient time to investigate, otherwise cash must accompany order. No charge is made for boxes or packing. We exercise the greatest care in preparing the orders for shipment. It is seldom an order does not arrive in perfect condition. However, we will adjust reasonable claims.

We cannot be held responsible for results after plants are planted, as so much depends on the knowledge in caring and planting of plants, also weather conditions will often cause the difficulties.

No orders accepted for less than \$2.00.

PITZONKA'S PANSY FARM,
Bristol, Pa.

"The Home of the Pansy"

*I*N THIS CATALOG we are attempting to display the different plants we grow in quantity, with Pansies as our specialty. We have been growing Pansies continuously for over 40 years, always having in mind to improve our Strains both in size of blooms and new colorings. Each season we purchase Pansy seed of the rarest and most expensive varieties grown in this country and Europe. We of course plant them in our trial beds and they are under observation for a season to study their habit of growing, size of bloom, productivity, color and shape of flower. If we can find any plants that meet with our approval they are added to our mixture. In this way we have built up a strain of the highest degree of excellence.

All the Pansies we sell are grown from our seed. The seed we buy is for planting in our test beds.

How we have succeeded in building up our strains is shown by the many complimentary letters we get from our old friends and customers, some of whom have been buying from us yearly since the firm was quite young. If you have never tried our Pansies, we invite you to send us an order this season. It will prove to our mutual advantage.

Pansy Culture

PANSIES can be grown on any well drained soil. If your soil is heavy and gets soggy in wet weather, the beds should be raised at least 4 inches above the level. Add a little sand; it will help to lighten the soil. This need be done only in extremely heavy soil.

Always bear in mind, in order to have large and beautiful flowers, the soil should be very rich. Fertilize your beds a month or two before planting when possible; use well rotted stable manure liberally. Commercial fertilizer can be used with success if applied intelligently, using for humus, peat moss, dead leaves, or like material.

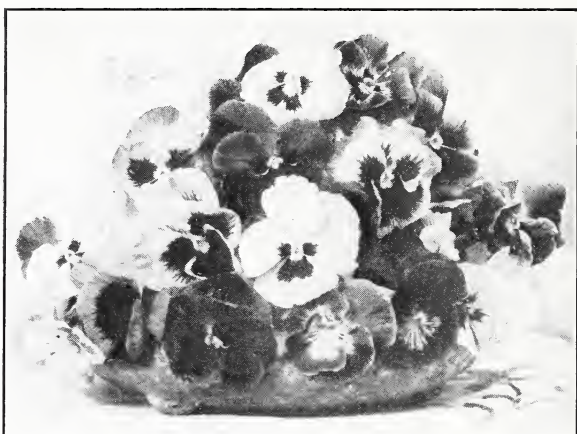

When preparing for planting, pulverize the soil to a depth of 6 inches or more, firm the soil. Place plants no less than 4 inches square, up to 9 inches is better if you have the space. Put roots in ground only as deep as they were in nursery. If ground is sticky, wait until it dries a little. In hot, dry weather, water thoroughly after planting, covering with paper during heat of day until plants are rooted. In the South, little or no covering will be necessary to carry plants over Winter. Water frequently in hot, dry weather and pick flowers when they show signs of fading. This will insure a continual bloom. Following these instructions you can expect Pansies at their best.

The above are photographs of the large and regular size Pansy plants. They are greatly reduced, of course, but it shows the stocky, vigorous plant, and note the wonderful root system. Our soil is fairly light, which accounts for the good roots. The advantages of the large size are that they bloom a few weeks earlier and will show more flowers at first.

The regular size will take a little longer to develop, but should be just as nice in the end. We recommend the large size for greenhouse Winter blooming as they are ready to flower. When ordering, be sure to state size and number wanted.

Pitzonka's Giant Mixture Pansies

PANSIES

PITZONKA'S GIANT-FLOWERING MIXTURE

This variety represents the efforts of over 40 years of careful selection and improvement. The flowers are giant in size and perfectly shaped, with long, strong stems. The petals are velvety, some semi-double at edge. This strain comprises a most beautiful collection of colorings and markings. Variegated colorings ranging from delicate orchid and yellow tints to deep reds, blues and purples. The plants are robust and healthy, very compact, and bloom profusely.

For general purposes, we find PITZONKA'S GIANT FLOWERING MIXTURE the most popular.

HOME GROUNDS — WHERE WE RAISE OUR PANSY SEED

PITZONKA'S PRIZE MIXTURE

This is but the third season we have offered this new variety for sale. The colors are entirely new to our other strain, Pitzonka's Giant Flowering Mixture.

This strain consists of several shades of red and pink, a rich yellow, a blue, and many other handsome colors. It has been selected for the giant size, the form and the texture of flowers. Only plants that are strong growers are selected. This strain is all the name implies. We have but a limited quantity of this wonderful variety, for in making up the mother bed only the very choicest stock is taken for seed production.

PERENNIALS

How to Use and Care for Them

PERENNIALS as ever are the most interesting of plants. They are hardy, and once you start to plant them you become fascinated and want to keep on adding more. A bed started one year and not finished does not mean you must start over the next year. Arranging the plants to show to the best advantage is most interesting.

In grouping the plants, that is, putting two or three plants to the group, the taller plants should be placed to the rear of the bed. Do not crowd them. Allow a little space here and there through the bed for your annuals. They often give color and cut flowers in the late Summer when many of the perennials are through blooming. In selecting plants for the border, choose plants for blooming in different seasons. Pansies and English Daisies will give you the first flowers of the season. These should be planted toward the front. Tulips can also be planted in the border. We must not forget our standbys—the HOLLYHOCKS, CANTERBURY-BELLS, FOXGLOVES, HARDY PINKS, SWEET-WILLIAMS, PHLOX, PYRETHRUM, FLAX, the many different kinds of DELPHINIUMS, including the newer hybrids, and many other old-fashioned hardy plants. In the Fall we have the AGERATUM, CHRYSANTHEMUMS, etc.

In the Summer the beds should be mulched with peat moss at least one inch thick. This will give the plant protection against droughts. For the Winter we must protect them during the severe part, being careful not to cover too early. After the ground is frozen is the right time.

Use only light material for the plants that retain their foliage such as the FOXGLOVE, CANTERBURY-BELLS, SHASTA DAISY and COREOPSIS. Straw is good for covering. Remove in the Spring when growing weather starts.
